

BIG BENEFITS WITH PROCESS AUTOMATION

how it works

Considerable benefits can be achieved by deploying and monitoring model-driven automated processes.

Myth busted!

You don't have to be a **LEVEL 5** in process maturity to take advantage of process automation.

DIRECTING THE FLOW

Steps

Process Modeling

designing how a business process needs to change/work

Process Automation

deploying the model to real life

Process Analysis

monitoring process performance to see if the results desired are achieved

OPTIMIZE

BUSINESS NEED

Problems

⚠ Efficiency

Workforce is manually performing steps that could be automated.

⚠ Performance

Interacting with more than one system, logging on to multiple applications.

⚠ Transparency

Executives want visibility into whether or not the overall system improvements tie back into their strategy model.

ROLE BENEFITS

Solutions

Adding a layer of automated workflow over the top of existing disparate systems enables one go-to source for data input, task assignment, data collection and reporting.

Automation = Real and Efficient Progress!

#GoodbyeBottlenecks!

Employees

Moving to an automated workflow distributes and communicates tasks that need to happen in parallel. As a result, each request moves through the process much quicker.

Teams can coordinate activities much more efficiently.

Managers

Automated workflow enables a single system to collect and report on all data. Progress is seen and bottlenecks are noticed and resolved immediately.

Ability to leverage personalized dashboards to see performance trends and plan for the future.

Executives

Improvement and optimization is clearly visible via Key Performance Indicators.

Automating business processes makes things happen in a more controlled and measurable way.
